

⇒ Retrieve Data
 Data
 Date & time
 Image

⇒ get() load()
 ↓ ↓
 eager loading lazy loading by cache

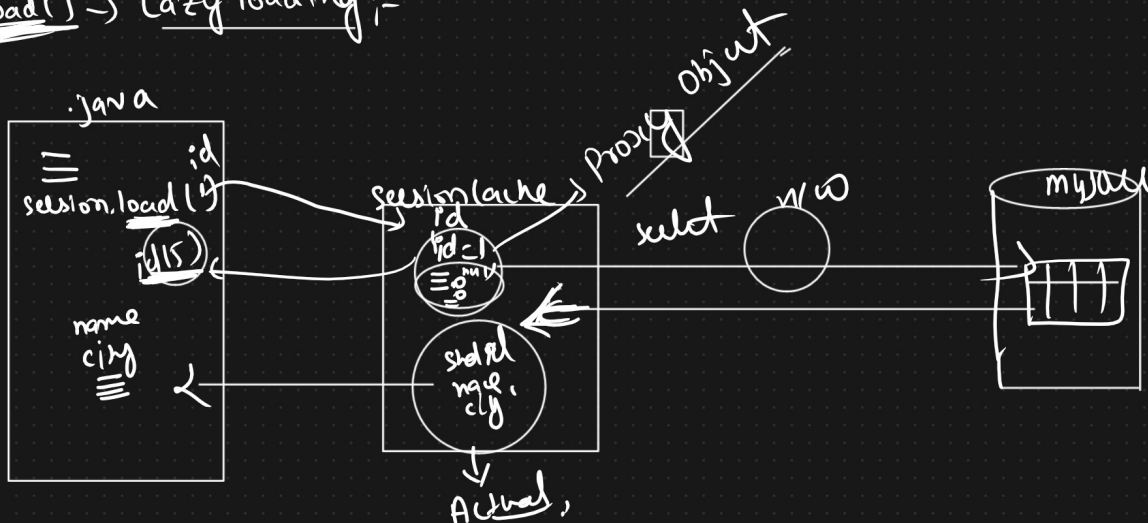

Object ⇒ save() update() save or update()

⇒ 2 methods to retrieve Data
 ① get() ⇒ eager loading
 ② load() ⇒

if id passed is present then it would return object else
 it will not create object & leading to NullPointerException.

load() → Lazy loading :-

=> id is found & not found → one proxy object will be created ↓

if id is found then it will return actual object by triggering query internally & if id is wrong & I want info of more than id i.e. no id property then it will lead to ObjectNotFoundException.

=> Date and time :-
