

=> Spring MVC :-

HTTP Methods ==> GET, POST, PUT, DELETE

- Spring4.x --> To Bind our method to GET Request we have @GetMapping
- > To Bind our method to POST Request we have @PostMapping
- > To Bind our method to PUT Request we have @PutMapping
- > To Bind our method to Delete Request we have @DeleteMapping

All this also can be managed by @RequestMapping("/", method=RequestMethod.GET)//POST//PUT//DELETE

Method will be binded to GET Request by default if we have not specified method request attribute

=====

APP:- embedded Tomcat Server :-
